PROFESSIONAL SUMMARY

Android Developer with 5+ years of experience designing, building and shipping native Android applications in Kotlin and Java, including a lead Android role with a Swiss product company and 3+ apps published on Google Play. Skilled in Jetpack Compose, MVVM/MVI and Clean Architecture, Kotlin Coroutines and Flow, Retrofit, Room, Hilt, WorkManager, Firebase and Crashlytics. Experienced across the full app lifecycle: requirements, UI implementation, API integration, Android SDK upgrades, debugging, testing, Play Store release and production support. Brings additional full-stack depth (React, TypeScript, Django REST Framework, PostgreSQL, Redis, WebSockets) and IoT experience (ESP32, ESP8266, Arduino, MQTT), enabling end-to-end ownership of mobile products and their backends.

TECHNICAL SKILLS

Languages: Kotlin, Java, Python, TypeScript, JavaScript, SQL

Android Development: Android SDK, Jetpack Compose, XML Layouts, Material Design 3, Android Jetpack, ViewModel, LiveData, StateFlow, Navigation Component, Room, DataStore, WorkManager, Paging 3, RecyclerView, Fragments, Services, Broadcast Receivers, Runtime Permissions, Location Services, Lottie

Architecture & Patterns: MVVM, MVI, Clean Architecture, Repository Pattern, SOLID Principles, Dependency Injection (Hilt, Dagger), Offline-First Design

Async & Networking: Kotlin Coroutines, Kotlin Flow, Retrofit, OkHttp, Gson, REST APIs, JSON, WebSockets, MQTT, Offline Caching & Sync

Firebase & Integrations: Firebase Authentication, Cloud Firestore, Realtime Database, Firebase Cloud Messaging (FCM), Crashlytics, Firebase Analytics, Push Notifications, Razorpay Payment Gateway, Gemini API, Bluetooth Low Energy (BLE)

Testing & Quality: JUnit, Mockito, Espresso, Unit Testing, SonarCloud, Android Profiler, Memory Leak Detection, Debugging, Code Reviews

Build & Release: Gradle (Kotlin DSL), KSP, ProGuard/R8, App Signing, Android SDK Migration, Google Play Console, Play Store Release, Git, GitHub, GitLab

Full-Stack & Backend: React, Redux Toolkit, HTML, CSS, Django, Django REST Framework (DRF), Django Channels, PostgreSQL, SQLite, Redis

IoT & Embedded: ESP32, ESP8266, Arduino, MQTT, Sensors, Relay Control, Hardware/Software Integration

Tools & Methods: Android Studio, IntelliJ IDEA, VS Code, Postman, Jira, Railway, Render, Agile/Scrum

PROFESSIONAL EXPERIENCE

Independent Software Engineer (Android & Full-Stack) **Jan 2025 – Present**
Self-Employed, Remote

- Architected and built Tapnix, a QR-based restaurant ordering platform covering menu, cart, orders, kitchen and waiter workflows, real-time order tracking and billing.
- Developed the Tapnix stack with React, TypeScript and Redux Toolkit on the frontend and Django, DRF, PostgreSQL, Redis and Django Channels (WebSockets) on the backend; deployed to Railway and Render.
- Implemented real-time order-status updates over WebSockets and staff notifications through Firebase Cloud Messaging (FCM).
- Built Nexahomez, a Kotlin Android smart-home app integrated with ESP32/ESP8266 devices, sensors and relays; handled device-state synchronization, physical-switch consistency and Wi-Fi/MQTT connection recovery.
- Built Android apps in Kotlin and Jetpack Compose, including Talk to AI (Google Gemini API voice assistant), a Smart Daily Expense Tracker and a Smart Attendance/HRMS app with offline sync.
- Provided Android technical support and maintenance for Spotshunt, a local-discovery mobile application.

Lead Android Developer **Jan 2024 – Dec 2024**
Gumb.AG, Schaffhausen, Switzerland (Remote)

- Led Android development of Gumb, a calendar and scheduling app for teams, clubs and associations, building and enhancing features in Kotlin with MVVM architecture.
- Drove the Android 13 to Android 14 platform migration, resolving SDK and build compatibility issues including KSP and Hilt integration.
- Integrated backend REST APIs and maintained data flow across UI, ViewModel/repository layers and backend services.

- Designed responsive Android UIs following Material Design guidelines, with a focus on usability and consistent app behavior.
- Investigated, debugged and resolved production issues and crashes using Firebase Crashlytics, improving application stability and quality.
- Owned Android builds and Google Play Console releases; collaborated with an international team through GitLab and SonarCloud code-quality checks.

Junior Android Developer **Jan 2021 – Dec 2023**

WayCool Foods and Products, Bengaluru, India

- Built and maintained Android apps in Java with MVVM, including the WayCool B2B online-ordering app used by business clients for day-to-day sourcing.
- Contributed to internal enterprise apps Quality Digitization, Agro360 and MyPrice used across the organization.
- Developed a bidding workflow where farmers submitted produce details and vendors reviewed and selected bids.
- Translated UI designs into production screens; integrated REST APIs, Firebase, Crashlytics and push notifications, using crash reports to fix stability issues.
- Supported releases of multiple applications on the Google Play Store.

Freelance Android Developer **Mar 2020 – Oct 2020**

Self-Employed, Remote

- Delivered Android features for multiple clients, converting business requirements into working screens, and handled bug fixes and ongoing maintenance.
- Integrated third-party services including Razorpay Payment Gateway, Zendesk SMS API and ApiXU weather API.

SELECTED PROJECTS

Smart Attendance / HRMS App

Tech: *Kotlin, Jetpack Compose, Clean Architecture, Hilt, Room, WorkManager, Coroutines/Flow, JUnit, Mockito*

- Time- and location-restricted attendance: punch-in 9:00–11:00 AM and punch-out 5:00–7:00 PM within a configured 300 m office radius.
- Offline-first storage with WorkManager auto-sync, duplicate-entry prevention, weekly summaries, and unit tests for time/distance validation and sync logic.
  Repository: github.com/AjayTheXplorer/HRMS_App

Smart Daily Expense Tracker

Tech: *Kotlin, Jetpack Compose, Material 3, MVVM, Room, Hilt, StateFlow, Navigation, Lottie*

- Expense entry and list screens with validation, date filtering and local Room persistence.
- Daily/weekly reports, category breakdown charts, CSV export, receipt-capture flow and animated UI feedback.
  Repository: github.com/AjayTheXplorer/ExpenseTracker_App

Tapnix – Contactless Restaurant Ordering Platform

Tech: *React, TypeScript, Redux Toolkit, Django, DRF, PostgreSQL, Redis, WebSockets, FCM*

- End-to-end flow: QR table scan, menu, cart, order placement, kitchen/waiter notifications, real-time status and final bill.
- Working MVP with customer, kitchen, waiter and admin workflows.

Nexahomez – Smart Home / IoT Automation

Tech: *Android, Kotlin, ESP32, ESP8266, Arduino, MQTT, Firebase, Sensors, Relays*

- Android app and embedded-device system for appliance control, real-time status synchronization and live hardware testing.
- Independent D1–D4 channel control, physical-switch/app-state coordination and automatic connection recovery.

KEY ACHIEVEMENTS

- Published 3+ Android applications on Google Play across professional roles.
- Led the Android 14 platform migration for a Swiss scheduling app, resolving KSP/Hilt build compatibility issues.
- Independently built a working full-stack restaurant ordering MVP spanning web, backend, real-time communication and cloud deployment.

EDUCATION

Bachelor of Science in Information Technology | Arunachal University | CGPA: 7.1 **2013 – 2016**

LANGUAGES

English (Professional Working Proficiency), Hindi (Native)
